Democrat Operative ADMITS: We've Been Committing Massive Mail-in Vote Fraud for Decades

SELWYN DUKE
GUEST CONTRIBUTOR

"There is no race in New Jersey — from city council to United States Senate — that we haven't worked on," states the Democrat operative. He also reveals that such efforts, which extend far beyond New Jersey, "could be enough to flip states."

The operative is talking about what mainstream media assure us is no problem: vote fraud. In fact, the operative's specialty is fraud effected via mail-in ballots — a voting method Democrats want to implement nationwide for the presidential election using COVID-19 concerns as a pretext.

The man, described as a "top Democratic operative" by the *New York Post*, has been committing mail-in vote fraud "on a grand scale, for decades," writes the paper. The *Post* spoke to

him under the condition of anonymity, but confirmed his identity and reveals that he's a Bernie Sanders partisan indifferent to both major-party candidates on the ballot. He has a warning, too.

There "is going to be a f-king war coming November 3rd over this stuff," he told the *Post*. But if "they knew how the sausage was made," he added, "they could fix it."

The operative sure knows — and he explained, in detail, how mail-in vote fraudsters have been stealing elections for years. The Democrat admits to not only altering ballots himself, but to having led vote-fraud teams and to training at least "20 operatives in New Jersey, New York and Pennsylvania — a critical 2020 swing state," writes the *Post*. And how many have those trainees trained, as this mushrooms?

We don't know. What is

certain is that in an "election that is swayed by 500 votes, 1,000 votes — it can make a difference," the paper related the tipster as warning: "It could be enough to flip states."

The Architecture of Electoral Artifice
Relating the fraud's mechanics, the *Post* informs that in New Jersey, for example, voters receive a mail-in ballot and "certificate of mail in voter" (which the voter must sign) in a large envelope. Unbelievably, however, the ballot has no "specific" security features; thus, the operative explains, he'd just replicate them using a copying machine.

But the envelopes are more secure and can't easily be recreated. So the Democrat said that he and his team would go to residences and offer to mail in voters' ballots as a public

CDC: Fewer Than 10,000 Americans Have Died From COVID-19 Alone

MICHAEL TENNANT
GUEST CONTRIBUTOR

Only six percent of Americans who have died with COVID-19 died strictly from the virus and not from other causes, according to new numbers from the Centers for Disease Control and Prevention (CDC).

The CDC's latest COVID-19 provisional counts, covering February 1 through August 22, say that 164,280 Americans have suffered deaths "involving COVID-19."

That, of course, can mean anything from having had a recent positive COVID-19 test (which may or may not have been accurate) to having tested positive months earlier to simply having been declared positive based on symptoms (with hospitals facing strong financial incentives to claim COVID-19 deaths).

For the sake of

argument, however, let us assume that the CDC's numbers are valid. Out of those 164,280 deaths, the CDC calculates that just six percent of them, or 9,857, were caused solely by COVID-19. "For deaths with conditions or causes in addition to COVID-19, on average, there were 2.6 additional conditions or causes per death," the agency says. In other words, 94 percent of those who died with COVID-19 already had two or more other serious health issues such as hypertension or diabetes.

On top of that, age was a major contributing factor. Ninety-two percent of deaths involving COVID-19 occurred among individuals aged 55 and older. Persons 75 and older accounted for 58 percent of such deaths.

Hence, it is hardly surprising that 22 percent of COVID-19 deaths occurred in nursing homes and long-term care facilities, where

most residents are both aged and infirm. That number is considerably higher in states that ordered these facilities to accept COVID-19 patients and would be higher still in New York if that state had not changed its counting method to disguise the order's deadly results.

LewRockwell.com blogger Michael Rozeff observed:

It is quite hard to shake loose of the idea that if it had not been for COVID-19, these otherwise seriously ill and elderly people ... would still be alive. But there is no way to blame COVID-19 solely when several other co-morbidities are present. The other ailments are present and contributory. I know this sounds terrible to say, but clear thought demands it. These people already had one leg in the grave. We can imagine this,

CDC

From page 1

which is true in most instances, that a person who is healthy and has no other ailments shakes off the virus-induced illness.

However, what if that person is the victim during that bout of illness of several more severe health issues? Then he or she may perish. What's to blame, the initial COVID-19 which could have been survived, or the subsequent co-morbidities like heart disease or emphysema? It is impossible to single out a sole cause when several are present

together.

Despite the deaths, the CDC's statistics should be considered good news. According to the CDC, COVID-19 has thus far played a role in the deaths of just 0.05 percent of the U.S. population and was the sole factor in the deaths of a mere 0.003 percent.

This is not the picture one gets from the mainstream media, which thrives on coronavirus panic. In fact, their hysterical reporting of "cases" and other meaningless statistics has led Americans to believe that COVID-19 has wiped out nine percent of the U.S.

population. That's 180 times the number of people the CDC claims have died *with* COVID-19 and 3,000 times the number the agency says have died *from* COVID-19.

It's also not the impression one gets from most government officials, who are currently enjoying power trips courtesy of the fear they have instilled in their citizens. If those citizens were to become aware of the CDC's latest statistics and other relevant facts, they might well come to the same conclusions as Rozeff: "It means that existing draconian measures should all be shelved

immediately! They are not just neutral in their effects. They are known to be harmful in many ways, including causing deaths that otherwise would not have occurred. It means that the crash-push for vaccines should be abandoned. There is no dire need to rush an untested vaccine into production and inoculate large numbers of people."

There is, however, a dire need to put an end to the COVID-19 police state once and for all.
